

sodastream
PROFESSIONAL™

Reduce single-use plastic waste and commit to reusable bottles.

Designed to deliver customizable hydration on-the-go, the ecosystem is made up of three components: a beautifully designed water dispenser, a smartphone app called the SodaStream Connect, and an individualized code for reusable bottles that recognizes users when they fill up.

Nearly 160,000 single-use plastic bottles were avoided through a three-month pilot of this platform in 2019-2020.

The SodaStream Professional tracks and displays environmental impact so students, parents, and schools can see exactly how many bottles they've saved.
